

For removal of odour from treated sewage water

"The Ultimate Solution for Odour-Free Living."

A comprehensive formulation designed to significantly decrease malodour present in treated sewage water by targeting and reducing the presence of hydrogen sulfide (responsible for the rotten egg smell), ammonia (known for its pungent odour), and various organosulfur compounds (which produce garlic-like smells).

KEY FEATURES :

- › Advanced molecular odour neutralization
- › Doesn't disturb existing plant conditions
- › User-friendly application protocol

HOW TO USE :

- › Dose 5-10ml per m³, depending on the malodour concentration
- › For exact dosage contact amalgam's representative

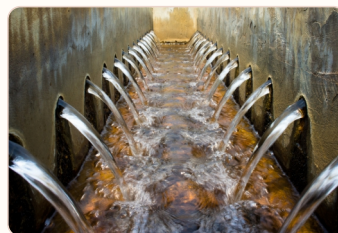

BENEFITS :

- › Helps to remove broad range malodour
- › Can be dosed using dosing pumps
- › Liquid form, Quick reaction time
- › No residues after reaction

Bulk packaging available in:

50 Kg,
200 Kg.
